

Dictionary

A Python document with the following format must be generated for each section:

UT3A2_n.py → where n will be the section of the activity.

All *.py files must be compressed into a .zip file, named as shown below, and uploaded to the activity.

2DAM/DAW_UT3A2_Lastname1_Lastname2_Firstname.zip

Note: Indicate **DAW** either **DAM** according to the cycle

.

If these rules are not met, the activity will be evaluated with a **0**

1. 1. Create a program that manages an address book using a dictionary. The information to be stored is:
 - First Name
 - Last Name 1
 - Last Name 2
 - Address
 - City/Town
 - Province/State
 - Postal Code
 - Phone Number
2. The program will have a menu with the following options:
 1. Add Contact
 2. Delete Contact
 3. Edit Contact
 4. Search for a contact by a specific field and list the results
 5. List all contacts
 6. Exit
